Garage Door Industry Solutions

Solutions for panels, track, struts, angles, and weather stripping across residential and commercial applications.

For over 50 years, Samco Machinery has partnered with garage door manufacturers to design, build, and support production solutions focused on precision, efficiency, and long-term performance. From standalone machines to complete turnkey lines, our solutions are built to support the evolving needs of garage door manufacturers.

Production Applications

- Setting up new garage door production capabilities
- Expanding existing production capacity
- Managing complex door, track, and profile requirements
- Reducing changeover time and improving line efficiency
- Introducing new product lines or configurations

Garage Door Panels

Designed to reduce changeover time and improve production efficiency.

Samco delivers solutions for garage door panels, from standalone machines to complete insulated door production lines. These solutions support consistent, high-quality panel production across a range of configurations.

Key Features

- Multi-zone rollformer design
- Automated changeover
- Powered width adjustment
- Powered flange height adjustment
- Adjustable rib positioning
- No manual shims or spacer changes

Garage Door Track

Built to streamline punching, bending, and handling in a single production line.

Samco's garage door track solutions support both residential and commercial track production.

Track Capabilities

- Dual-lane production for left and right track
- Integrated pre-punch press and dies
- In-line bending capability
- In-line bundling and strapping
- 0 to 90° bend capability
- Support for residential and commercial track

Garage Door Angle

Designed for high-volume production of precision angle components.

Samco delivers solutions for angle production that ensure dimensional consistency and repeatability across every run. These components are used throughout garage door assemblies to connect door sections to track and frame systems.

Key Features

- Supports perforated and plain angle production
- Compatible with multiple material types, including galvanized and stainless steel
- Handles a wide range of material thicknesses
- Integrated punching capabilities
- Designed for high-speed, consistent output

Garage Door Strut

Designed to produce structural reinforcement components for reliable door performance.

Struts reinforce garage door sections, particularly in wider doors where rigidity and wind load resistance are critical. Samco solutions ensure consistent, high-quality production across all strut profiles.

Track Capabilities

- Production of multiple strut profiles and dimensions
- Compatible with various material gauges
- Integrated punching and slotting capabilities
- Designed for efficient, high-volume production
- Consistent profile accuracy

Weather Stripping

Samco delivers solutions for garage door weather stripping designed for consistent, high-quality production. These solutions support reliable sealing performance across residential and commercial applications.

Key Features

- In-line vinyl strip application
- Designed for consistent profile quality
- Suitable for commercial-grade materials
- Built for efficient, high-speed production

Built for Long-Term Production

In-house engineering
and tooling design

Integration with upstream
and downstream processes

Solutions for scalability and
evolving production needs
