Racking & Shelving Rollforming Solutions

Flexible, High-Performance Solutions for Industrial & Commercial Applications

Racking and shelving manufacturers need consistent, accurately formed components across a wide range of profiles, sizes, and production requirements. Samco develops rollforming solutions for step beams, upright posts, shelving, and other storage components, with equipment configured around the required profile, production volume, and manufacturing process.

Racking Applications

Samco provides rollforming solutions for structural racking components, with equipment configured around profile requirements, production volumes, and integrated processes.

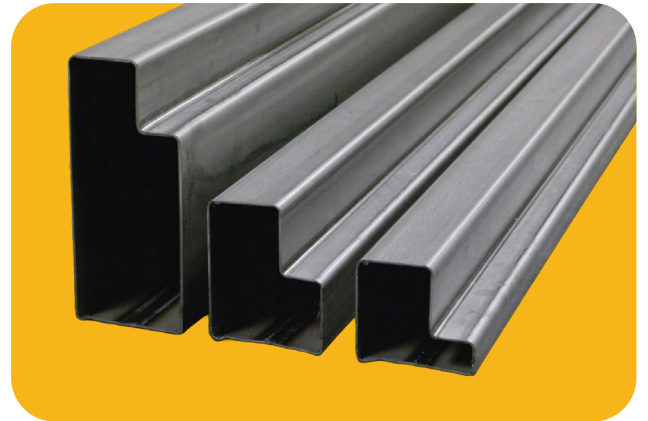

Step Beams

Engineered for continuous, high volume beam productions

Samco step beam rollforming lines integrate forming, inline welding, and cut-to-length operations into a continuous production process.

Key Capabilities

- Continuous inline HF welding
- Hydraulic flying cut-off capability
- Closed-loop length control
- Consistent part-to-part tolerances
- Configurations for multiple beam sizes
- Designed for continuous production

Upright Posts

Precision forming for structural rack components

Samco upright post rollforming solutions are configured around profile, punching, and production requirements for racking applications. SAMCO's current materials specifically identify upright post rollformers as part of its racking product offering.

Key Capabilities

- Multiple profile configurations
- Integrated punching capability
- Consistent dimensional accuracy
- Configurable cut-to-length operations
- Designed around required production volumes

Shelving Solutions

Flexible production for a wide range of shelf configurations

Samco shelving lines are designed to support efficient production from either coil or blanks, with the capability to form four-sided shelves in a single operation.

Key Capabilities

- Four-sided shelf production
- Coil-fed or blank-fed configurations
- Integrated forming and cut-off operations
- Flexible production for varying shelf requirements
- Configurations designed around production volume

Designed for production Flexibility

Racking and shelving manufacturers often need to accommodate different profiles, dimensions, and production requirements. Samco solutions are configured to provide the flexibility needed to respond efficiently to changing production demands.

Flexible Configurations

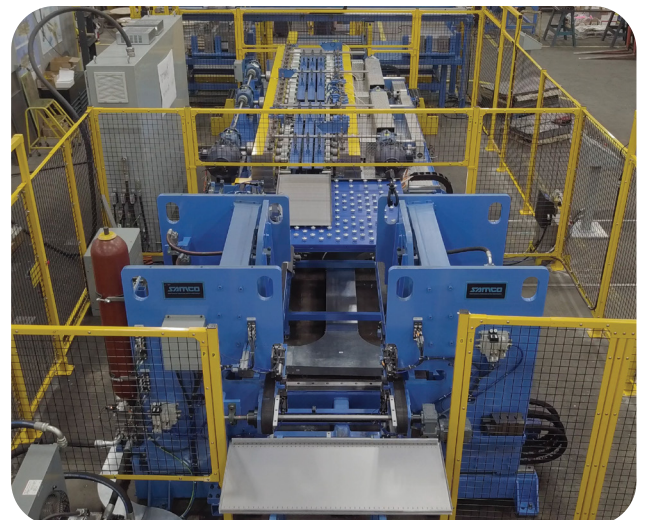

Equipment configured around profile and end-product requirements

Integrated Operations

Forming, punching, welding, cutting, and handling integrated where required.

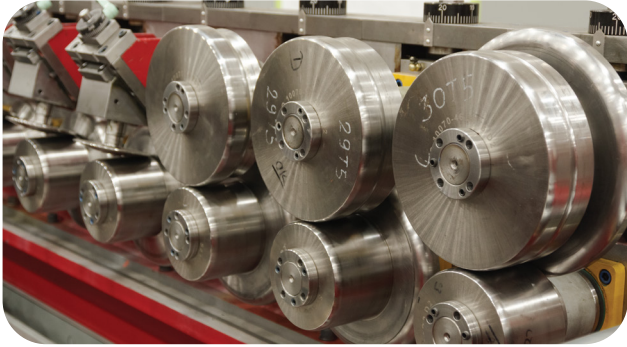

Efficient Changeover

Designed to support changing profiles and production requirements with reduced setup demands.

Built for Industrial & Commercial Racking & Shelving Manufacturing

Samco combines engineering, production integration, and ongoing support to help manufacturers build efficient, adaptable operations for changing production demands.

Engineering & Tooling

Developed around profile and product requirements

Flexibility & Scalability

Solutions designed to accommodate changing profiles, dimensions, and production

Production Integration

Equipment and processes configured to work as a coordinated production line.

Installation & Support

Installation, operator training, and ongoing technical service
